POST

A Story . . .

May 7, 2020

Technology and the Earth

----“In the beginning … technology hurt earth. And in the greatest twists of planetary fate, this environmentally foiled start to technology might evolve into the only reason why shesurvived. Quantum computing. Artificial intelligence. Remote sensing. Material sciences. Without technology the earth mighthave never survived on its own. It’s irony on a planetary scale. A planetary paradox. What started outas harm might have been the beginnings of what in the end evolves to save her in the first place. Reads almost like a novel. Perhaps the jottings of an all-knowing storyteller with a sense of humor and a desire to make a real “page turner” of this story of creation. God gives earth to man. Man causes harm. God takes something bad and through man makes it good. Something beautiful, redemptive, and transcendent about this strange paradoxical unfolding that might be occurring.”- Jed Anderson, Creator, Ceres AI
