Comment Filed on Trump Executive Order to Reduce Regulations that Includes Plan for Simplifying the Air Quality Management System

Originally written: April 12, 2017 · Published here: May 12, 2026

A public comment was filed on Executive Order E.O. 13771 that includes a plan for simplifying the air quality management system at its foundation: (see below or https://www.regulations.gov/document?D=EPA-HQ-OA-2017-0190-0226 (https://www.regulations.gov/document?D=EPA-HQ-OA-2017-0190-0226)).

Time to simplify the nation's air quality management system to better prepare ourselves for the problems and opportunities of a 21st century world. We can make it happen.

This is how your comment will appear on Regulations.gov:

Comment: My name is Jed Anderson. I am an environmental attorney with the AL Law Group and former attorney with Baker Botts and Vinson & Elkins, and an Adjunct Professor of Law at the University of Houston Law School where I taught the Clean Air Act.

I appreciate the opportunity to provide the following comment and proposal.

Instead of working through each rule individually to simplify the regulatory system– a much easier, quicker, and simpler way to achieve the goals of E.O. 13771 is to work the problem backwards starting with a simple solution. As John Gall said, “A complex system that works is invariably found to have evolved from a simple system that worked. A complex system designed from scratch never works and cannot be patched up to make it work. You have to start over, beginning with a working simple system.”

To this end, attached is a proposal that reduces regulations by approximately 75% while improving air quality. The proposal could be accomplished via reforms to the Clean Air Act or potentially by consolidating statutory programs via a regulation or Executive Order that creates an alternative means of compliance approach consolidating compliance with the programs. Attached is a proposal that was submitted to the Texas Commission on Environmental Quality yesterday that includes this simplification approach via consolidation. Attached also is a summary along with draft legislative text that implements the regulatory reduction approach via statute.
