POST

Fysics (sic) . . . & Faith . . .

June 7, 2022

… how did I miss this?

The limits of physics …

The limits of faith …

How did I miss this? …

OUR . . .faith

How did I miss this???

OUR FAITH.

Interesting how many times I can pour over the same scripture and feel like I've never read it before.

It's the pronoun! I never really noticed the pronoun. Geeze. It's the pronoun.

- "YOUR FAITH has healed you."
- "According to YOUR FAITH let it be done to you."
- "And he did not do many miracles their because of THEIR lack of faith."

- “Why did YOU doubt?”

Fascinating. The text doesn’t say “I healed you” . . it says “YOUR FAITH has healed you.”

FAITH

DEPENDENT

UNIVERSE?

God’s power.

Our faith.

What are the limits of physics?

What are the limits of faith?

What are the limits of possibility?

2 questions I ask myself … when someone or the world tells me something is impossible (like building a quantum AI machine to protect humanity and nature) …

1. Is it prohibited by the laws of physics?

2. Has this person identified a valid exception to faith? (i.e. Is the assertion that this person or the world is making that all things are not possible through faith because this one’s impossible … a true exception to faith)

It almost always falls out under question #1 before I even get to question #2.

---“Impossible is just a big word thrown around by small men who find it easier to live in the world they’ve been given than to explore the power they have to change it. Impossible is not a fact. It’s an opinion. Impossible is not a declaration. It’s a dare. Impossible is potential. Impossible is temporary. Impossible is nothing.”

— Muhammad Ali

---“It is simply a statement of fact. The Romans could have had the telephone; the Greeks could have had the cinema; the Babylonians could have had the automobile—had they been mentally ready. The laws of nature were the same in those ages as in ours, the same materials were in the ground—but the minds of the Ancients were not ready for those things, and so they had to go without them.” — Emmet Fox

---“I myself believe that there will one day be time travel because when we find that something isn’t forbidden by the over-arching laws of physics we usually eventually find a technological way of doing it.”- David Deutsch Oxford University [attributed as the 1st to conceive of quantum computing]
