Semi-automated permitting …

I’ve been asked for details from some of the thousands of you about the design of Permit.AI

Permit.AI

- Permit.AI would perform not only most of the applicant’s process, but many of the current agency permitting tasks.
- Agency hyperlinks and review algorithms would be provided for agency review and verification purposes.
- A citizen app with AI sentient analysis would be developed for early comment, review, and incorporation purposes.
- Agencies could choose to ignore the AI, but value would be derived regardless—especially for those companies with Environmental Social Governance investment concerns.
