POST

The Noise . . .

October 10, 2020

“You could come up with a cure for Covid … and unless you had a good publicist … I don’t think anyone would know about it.”

Shell Oil Company announced its using artificial intelligence to identify CO2 reductions …

… Shell has no idea that EnviroAI has already identified over $157 Million in criteria pollutant reductions (NOx and VOC). We have the same information for all major facilities and companies in Texas.

---“I will continue with persistence and energy. It’s frustrating right now with all the noise in the world. If you come up with something new and positive that can really help the environment and business, unless you are famous or have tons of money for a publicist, their is a good chance that no one will ever hear about it. It’s tough to stay patient and persistent. It comes down to faith, a commitment to keep loving on people and the environment regardless of receptivity, and an unwillingness to be deterred by anything … anything when it comes to simplifying environmental protection.” - Jed Anderson, Creator, EnviroAI

—“Energy and persistence conquer all things.” ~ Benjamin Franklin
